A study of $\psi(2S)$ decays to axialvector plus pseudoscalar meson pairs DANIELA PALUSELLI, *University of Hawaii at Manoa (representing the BES Collaboration)* — A sample of 3.5M $\psi(2S)$ decays are used to determine branching fractions for J/ψ and $\psi(2S)$ decays to axialvector plus pseudoscalar meson pairs ($b_1\pi$, $K_1(1270)K$, and $K_1(1400)K$). The results are compared with predictions based on extrapolations from the corresponding J/ψ decays and expectations based on flavor-SU(3) symmetry.
